Please copy/paste your AI policy here

Policy for the Use of Generative AI (LLMs) in CS 3431

Use of Large Language Models (LLMs) or other Generative AI tools (such as ChatGPT, GitHub Copilot, or similar systems) is not permitted for any graded assignments unless explicitly stated otherwise by the instructor.

All graded work is expected to represent your own individual effort (or your team's collective work, in team assignments). If you use external sources for inspiration, examples, or background information—such as during warmup exercises or for your term project—you must cite all sources clearly.

If you are ever uncertain whether using an AI tool or other resource might constitute academic dishonesty, please ask me before proceeding. I'll be happy to clarify.

If a team member commits code that appears inconsistent with the established code base and there is strong evidence that it was produced using Generative AI tools, please notify the instructor immediately.

Educational Use of Generative AI

In this course, you will have structured opportunities to learn how to use Generative AI responsibly and effectively to improve productivity, quality, and testing. For example, in the term project, after completing all required tasks, you will use Generative AI tools to add additional use cases to your application and revise some of your database schemas based on AI feedback.

Please note that Generative AI may only be used for the tasks explicitly permitted in the assignment instructions. Using it for parts you are expected to complete on your own will be considered plagiarism. Whenever you use Generative AI, you must also provide a brief reflection on:

How effective the AI-generated solution was,
How much of the generated code you could use directly, and
What modifications, corrections, or refactoring were necessary.
Except the above, their use is not permitted for any other work.

Because this is a writing course, the expectation is that you alone are doing the writing with the intention of improving your writing skills. As such, you MUST adhere to the following AI use guidelines for all assignments:

Appropriate use of AI for all assignments:

- You may use spellcheck, grammar check, and synonym identification tools (ex. Grammarly, MS Word).
- You may use app recommendations when it comes to rephrasing sentences you have drafted yourself.

Inappropriate use of AI for all assignments:

- You may not use original or entire sentences, lines of dialogue, or paragraphs suggested by an app.
- You may not use app recommendations when it comes to creating or tweaking outlines.
- You may not have an app generate an entire story draft or revise entire writing assignments for you.

Writing is integral to thinking and creating. It is also hard work. Natural language processing (NLP) applications like ChatGPT are useful tools for helping us improve our writing and stimulate our thinking. However, they should never serve as a substitute for either. And, in this course, they cannot. Evidence of inappropriate AI use will be grounds for submission of an Academic Integrity report. Sanctions will range from a zero grade for the assignment with a reduction in my class participation points, to an NR for the course. If in doubt, ask before submitting your assignment.

I'm assuming we won't have a problem in this regard but want to make sure that the expectations are clear so that we can spend the term having fun writing together – and not worrying about the origins of your work.

Use of AI is not permitted and will be considered a violation of the Academic Integrity Policy. Common examples of Academic Integrity violations include:

Copying and pasting text directly from a source without providing appropriately cited credit; includes submitting generative AI text as your own work

AI has become a standard tool in modern engineering practice, and this course treats it accordingly: as something to use thoughtfully, not avoid or outsource to.

****The core principle:**

AI will scaffold your learning, not replace it. Every use of AI in this course must be something you can stand behind, explain, and defend as your own understanding.

****Course Objectives and Where AI Fits:**

This course has eight objectives. AI use is explicitly scoped to two of them

1. Apply fundamental experimental techniques in mechanical engineering to real-world engineering problems: AI not applicable
2. Integrate sensors, actuators, and microcontrollers to collect and process engineering data: AI not applicable
3. Understand and apply principles of code architecture and flow: AI permitted (see below)
4. Design, assemble, and troubleshoot electromechanical systems: AI not applicable
5. Develop and interpret calibration curves: AI not applicable
6. Model and verify mechanical systems, comparing experimental results to theoretical predictions: AI not applicable
7. Practice engineering problem-solving and teamwork: AI not applicable
8. Communicate technical findings effectively through well-organized lab reports: AI permitted (see below)

****Objective 3: Code Architecture and Flow**

*Allowed: brainstorming code structure, debugging, optimizing, exploring alternative approaches

*Not allowed: generating code you cannot explain

*You will be asked to explain or modify your code during lab checkoffs and the midterm. "AI wrote it" is not a defense.

****Objective 8: Lab Report Writing**

*Allowed: improving spelling, grammar, tone, and organization

*Not allowed: generating content, writing analyses, or interpreting data

*All ideas, results, and conclusions must come from your own understanding of the experiment

***Not Allowed in Any Context**

-AI use during live quizzes or exams

-Data analysis

-Citing AI as a source: find and cite the original credible source instead

***The Standard That Applies Everywhere**

You are responsible for your work. "AI said so" is never an acceptable answer in engineering, in this course, or on the job.

*Disclosure: I use AI tools to refine course materials. All content is reviewed and verified by me; and I hold myself to the same standard I'm asking of you.

The STEM Education Center values empowering educators and learners to engage in meaningful learning and critical thinking. With the understanding that deep learning often requires productive struggle and metacognition (reflection), the use of generative artificial intelligence (GenAI) should be used in intentional and ethical ways. While AI can be a helpful tool for educators and learners, humans have

the responsibility of overseeing and judging the outputs to enhance learning (not replace the thinking), and to mitigate risks. Each EDU course, assignment, and activity is context-specific with distinct learning objectives, and students must demonstrate their proficiency in genuinely attaining the course objectives. Each student is responsible for assessing the validity and applicability of any GenAI output submitted. For guidance on the responsible use of generative AI, please direct questions to the course instructor. All coursework is subject to the WPI Academic Integrity policies.

Generative AI and Academic Integrity Policy*

This course operates on trust and integrity. You can trust me to give feedback on your work, to structure policies to support your learning as best I can, and to give my honest opinion on your usage of AI in whatever circumstance you choose. I trust you not to pass off generated content as your own, and overall to act with integrity and the intent to further your learning if you choose to experiment with generative AI systems.

Specifically:

- If you decide to use generative AI in a project or assignment, please disclose how you have used it in a supplemental document that you upload with your submission. At a minimum, clarify: which tool(s) you used and for what, what you perceive as the pros and cons of having used it, how you incorporated generative AI into your process, and whether there remains any content generated by the system in your final submitted product.
- If you use a generative AI system and do not understand its output (e.g., it creates mathematical or written language you do not understand), please make your best attempt at understanding it. You can always bring it to me with questions.
- Generative AI usage should be supplemental to your own work. Do: feel free to experiment with it for brainstorming, use it to embellish work you have done, or significantly modify its output (with disclosure!). Don't: give an assignment prompt as input and paste the output as your submission.
- Using generative AI is absolutely not mandatory or even expected. It is completely up to you whether to use or avoid these tools and the choice itself will not affect the grading of your work.

The honor code is a cornerstone of our learning community and of this course. It is your responsibility to know and follow academic integrity policies available on the WPI website at

<https://www.wpi.edu/about/policies/academic-integrity> . I will gladly answer any questions you have.

*This generative AI policy is built on work by Gillian Smith, Associate Professor of Computer Science and Director of the IMGD program at WPI.

Generative artificial intelligence tools—software that creates new text, images, computer code, audio, video, and other content—have become widely available. Well-known examples include ChatGPT for text and DALL•E for images. This policy governs all such tools, including those released during our semester together.

You may use generative AI tools on assignments/exams in this course, following the guidelines for appropriate and inappropriate use outlined below:

Appropriate Use of Gen AI tools:

You are free to use spell check, grammar check, and synonym identification tools (e.g., Grammarly, and MS Word);

You are free to use GenAI recommendations when it comes to rephrasing sentences or reorganizing paragraphs you have drafted yourself.

Inappropriate Use of Gen AI tools:

You may not use entire sentences or paragraphs suggested by a GenAI tool without providing quotation marks and a citation, just as you would to any other source. Citations should take this form: Creator of tool, name of tool. Response to prompt: _____ (Date used, web address);

You may not have a GenAI tool write a draft (either rough or final) of an assignment or answer to an exam question for you;

You may not use any GenAI tools to create images, artwork, videos, or presentations.

If you choose to use generative AI tools, please remember that they are typically trained on limited datasets that may be out of date. Additionally, generative AI datasets are trained on pre-existing material, including copyrighted material; therefore, relying on a generative AI tool may result in plagiarism or copyright violations. Finally, keep in mind that the goal of generative AI tools is to produce content that seems to have been produced by a human, not to produce accurate or reliable content; therefore, relying on a generative AI tool may result in your submission of inaccurate content. It is your responsibility—not the tool's—to assure the quality, integrity, and accuracy of work you submit in any college course.

If you use generative AI tools to complete assignments in this course, in ways that I have not explicitly authorized, I will apply WPI's Academic Honesty Policy as appropriate to your specific case. In addition, you must be wary of unintentional plagiarism or fabrication of data. Depending on the specific circumstances, the consequences for a first offense academic integrity violation related to misuse of generative AI could range from having to redo the assignment to filing a report that will be recorded in your academic file. Repeated offenses could result in university sanctions. Please act with integrity, for the sake of both your personal character and your academic record.

AI Policy: Expectation of the AI Use in CN2543

In CN2543, students have a choice and are encouraged to use AI tools to enhance their language learning experience, such as practicing conversation, receiving feedback on language use, or gaining explanations of grammatical concepts. When used ethically and intentionally, AI can serve as a role of valuable Pen-pal or Coach, supporting practice, reflection, and continuous improvement during the learning process. These roles help students build proficiency and deepen their understanding of the learning process. However, using AI as a role of Nanny by submitting AI-generated content as one's own work, is a violation of academic integrity and is strictly prohibited. AI should support, not replace, student effort to learning. The goal of students using AI is to utilize it as a tool to support their own learning by applying their own critical thinking and creativity throughout the learning journey. Below is the table summarized the guidelines for ethical and effective AI use in CN 2542.

Guidelines for Ethical and Effective AI Use in Language Learning

AI Role Description Function Should I use it? How do I use it?

Nanny Students submit AI-generated answers as their own work. Convenience Not allowed. This is a violation of academic integrity.

Pen-pal Students use AI to practice language skills, promoting cognitive engagement and metacognitive strategies to evaluate their learning. Practice Allowed. Use AI interactively to build language proficiency.

Coach Students use AI to improve and refine their language output through meaningful engagements and reflection through the process. Guidance Allowed. Use AI to revise drafts, identify errors, and monitor progress.

AI Adoption Level for Homework Assignment:

Each assignment of CN2542 will include specific information on whether and how AI tools may be used, following a two-level system. Students are expected to follow these guidelines carefully to avoid violation of WPI's Academic Integrity Policy.

No AI Permit Level. Students must complete the assignment entirely on their own, without assistance from any AI tools. This typically apply to exercise of lower-level literacy development exercise, such as translation and Q&A, sentence pattern practice, etc.

AI-assisted Permit Level. This applies to higher-level of literacy development exercise, such as composition writing and essay writing. Students may choose to use AI tools as a coach to support their learning by following the D.A.R.V protocol, which help guide them compare, review, and learn from the AI's suggestion to their original work. Students who utilize AI tools for assignment completion will be assessed according to modified rubrics designed to reflect their learning process.

Introducing the D.A.R.V Protocol:

The D.A.R.V protocol is a structured approach to writing improvement that helps students reflect on and learn from their drafting and revision process with AI assistance. It consists of four stages: Draft (the student's original work), AI-assisted Revision (a version enhanced with AI tools), Rationale and Reflection (a review and analysis comparing the original draft and the AI-generated revision), and Verdict (the student's final decision on what to adopt after reviewing the original draft, the AI-enhanced draft, and the instructor's feedback). This structure promotes students' critical thinking and writing skill development through deliberate comparison, reflection and revision. Each step will be assessed based on the criteria outlined in the grading rubric aligned with the D.A.R.V protocol. Detailed information can be found on the Canvas Site.

Academic Integrity:

Students are expected to work with integrity and honesty and to comply with WPI's policy on Academic Honesty: <https://www.wpi.edu/about/policies/academic-integrity> In addition, I would like to provide some general guidelines for appropriate use of (generative) AI tools in an academic setting.

Appropriate uses of generative AI could include:

Assistance with the elements of the writing process including organization and editing. Editing should be done with tools that assist with rather than generate rewrites. Examples of appropriate assistance include DeepL Write and Grammarly.

Assistance with research, such as Elicit. It is important to remember that AI often makes mistakes and all AI generated content should be verified for accuracy.

Translation using tools such as Google Translate or DeepL Translate.

You must note and briefly describe any use of AI in your assignments. This can be done in a foot note. For example, "I used spell check features to support and improve my writing, particularly my spelling and grammar". This can also be done by discussing your use in the text of a paper. For example, in the methods section of your paper, you could describe your use of Elicit to look for key findings in papers and to compare the approach to methods across different research papers.

Inappropriate use of generative AI includes:

Taking credit for AI generated content and claiming it as your own work. For example, you may not copy and paste an AI research assistant's summary of an article for your research assignments. You cannot use AI to generate writing, to re-write drafts, to generate or recreate presentations, or any other course material for you. Students who attempt to submit AI generated content as their own work will be subject to WPI's Policy on Academic Integrity. Then I include the "delegate don't collaborate" visual from this site:

<https://edtech.domains.trincoll.edu/ai-syllabus-policy/>

Artificial Intelligence and Academic Integrity

Why I've made these choices about AI

As Director of the Morgan Teaching & Learning Center I am constantly examining AI use in higher education, including the impact it can have on you as a learner. I often use AI to try and push the limits of what it can do in a teaching and learning setting. I expose myself to the ethical, sustainability, labor, and societal implications of AI in order to refine my own philosophy of its use.

A few ideas and findings that have impacted my current thoughts around AI include:

Generative AI is just a statistical text predictor (e.g., You are Not a Parrot, and a Chatbot is Not Human). It will always create average text that is high probability. Nothing it produces will ever be new or innovative. It is trained to sound confident as it provides answers. If it doesn't know, it guesses what might be plausible, even when that guess is factually wrong. That can lead non-experts and learners astray in ways that can be harmful (e.g., Why Language Models Hallucinate). Toor (2026) describes the problem with ChatGPT's hallucinations clearly:

OpenAI's proposed fix [to hallucinations]? Have ChatGPT say "I don't know" when it's unsure. Their own math shows this would mean roughly 30% of your questions get no answer. Imagine asking ChatGPT something three times out of ten and getting "I'm not confident enough to respond." Users would leave overnight. So the fix exists, but it would kill the product.

Radiologists sometimes perform more poorly after using AI (e.g., Budzyn et al, 2025) or it improves/worsens performance unpredictably (Yu et al., 2024). Because we don't know what the long-term implications are for learning or professional performance right now, caution is warranted. If trained professionals perform less reliably when they over-rely on AI, what might that mean for people who are still developing expertise? (e.g., The effects of over-reliance on AI dialogue systems on students' cognitive abilities)

There are problematic trends in human-AI relationships. As we are studying human behavior in this class, this point bears consideration: humans anthropomorphize everything and end up treating non-human animals and objects as having human abilities and traits (e.g., the Eliza effect). This has led to unhealthy and even harmful human-AI relationships (e.g., Illusions of Intimacy: Emotional Attachment and Emerging Psychological Risks in Human-AI Relationships)

Although I share these concerns (among others) and observations, I firmly believe that AI has the potential to do very interesting and even helpful things. As a certain fictional chaos theorist put it: "[You] ... were so preoccupied with whether or not [you] could that [you] didn't stop to think if [you] should." In other words, I want folks to pause, be thoughtful, and consider the ethical implications of what they are doing with AI before they use it (e.g., Stephen Hawking's warning). If you have read this far in the AI policy, send me an email with a picture of a cute baby animal, and I will give you an extra token. It also tells me you actually read the policy, which I appreciate more than you know.

I would love to talk with you about any of the choices I have made about AI. Come to student drop-in hours!

Expectations around AI

Here is how my philosophy (above) translates into specific expectations for this course. If AI does all the work and a student cuts and pastes it into a submission, that is a violation of academic integrity. Sometimes there are more subtle things that also count as academic integrity violations. For example, consider an example from Dr. Cardamone from Tufts University. She described two hypothetical situations related to AI use and academic integrity. As you read these, ask yourself: in each case, who did the work of learning?

A student who has a native language other than English works hard on an assignment, does all the thinking,

Use of GAI (generative AI):

The use of generative AI tools is a requirement in this class, with the following guidelines:

1. Citing AI Usage: If you use an AI tool to assist in generating content, you must include the prompt you used and a link or description of the AI tool as a footnote or in a dedicated section of your assignment. Transparency is key—just as you would cite any other source of information .
2. Permissible Uses: You may use generative AI to:
 - o Correct grammar and syntax in your writing.
 - o Brainstorm ideas or refine your topic.
 - o Generate an outline or structure for your assignment.
 - o Fact-check or suggest sources to support your arguments.
3. Limits on AI Use: The final written work must be your own. You are not permitted to use AI to draft, write, or substantially complete your assignment. While AI can assist in certain phases of the writing process, the final product must demonstrate your own critical thinking, analysis, and originality.
4. Academic Integrity: Using GAIs to write your assignment in whole or in part is considered academic dishonesty and will be treated as such, this means that you may get a 0 for an assignment or possibly an 'F' in the class. To date, I have given several students zero and had one student withdraw from the class to avoid a failure - this is just meant to let you know I am serious about this and do monitor use of GAIs in the material you submit as your own. Always ensure that your report engagement with the any AIs.

In addition, you are still responsible for the accuracy of the content that you submit. In other words, if the AI system generates inaccurate information, you will still be penalized for it. As such you are required to double check any output you use to make sure it is correct. It must be clear which parts are your contributions and which are written by a GAI. If it is unclear, I will assume it was written by a GAI.

For a graduate grant writing course:

Generative Artificial Intelligence (AI) Tools: You may use generative AI programs, e.g. ChatGPT, to help generate ideas and brainstorm, or for rote tasks such as formatting citations or checking grammar. You should note, however, that the material generated by these programs may be inaccurate, incomplete, biased or otherwise problematic. Beware that AI use may also stifle your own independent thinking and creativity. Generative AI-written content derives its output from other sources that the models were trained on, yet does not cite those sources itself, and is thus a form of plagiarism. You may not submit any work generated by an AI program as your own. If you include material generated by an AI program, it should be cited like any other reference material. When/if you use AI platforms in your assignments, please add a comment to your document to clarify where in your process you used AI and which platform(s) you used. You are ultimately responsible for the quality and integrity of the content you submit for grading in this course. (adapted from a syllabus statement from Prof. Rebecca Davis, St. Edwards University). Please also consider that in many ways, the use of AI is antithetical to the purpose of taking this course. We hope you will learn to think scientifically, analyze deeply, and communicate clearly. We therefore urge you to engage with this course in the manner in which we have intended.

AI Policy/ChatGPT, Grammarly, etc.: Any use of Artificial Intelligence is strictly forbidden in this class. This includes: brainstorming or running "practice" questions through an AI program; outlining; Canvas posts; formulating essay drafts; proofing work. Students who submit papers showing clear evidence of AI use will receive an NR or appear before the Campus Hearing Board; students who submit work that merely "sounds" like AI will be required to submit a new essay and pass an oral exam on the paper. Don't outsource your intelligence or moral integrity to a machine. You are better than that.

I ask that my students collaborate as teams for their team-based weekly reports (presented live and as slide decks) but that they write individually for the final report. They receive one lecture about how to do library research (Lori from library) and they include the search info in their reports. I do not check their reports with an AI detector; I treat them as professional adults and expect them to behave accordingly.

Not developed yet, but agree that one should be in place for IQP

GENERATIVE AI POLICY: Your work on the assignments, assessments, and projects should reflect your own original ideas and creativity. For the purposes of this course, "generative AI" includes use of programs including, but not limited to, ChatGPT, DeepSeek, and Anara. The use of generative AI to produce writing, figures, or data submitted to any assignment is strictly prohibited, and its use in this way is a violation of our academic honesty policy. The use of generative AI during in-class work is prohibited unless specifically directed otherwise for a specific assignment.

The rule about the Gemini feature that is now built into Google searches is slightly different. If you are given instructions for an assignment that permit Google searches, you may read the Gemini summary that appears at the top of the screen and use it to identify sources of information. In this case you must identify and cite the original source of the information.

You may use generative AI outside of class to summarize knowledge to aid your studying and to point you towards proper sources of information. However, be aware that generative AI is not always accurate/correct, and that you must abide by the specific rules for any given assignment.

Generative AI Course Policy

Your work on the assignments, assessments, and projects reflect your own original ideas and creativity. Thus...

The use of Generative AI or ChatGPT to produce writing, figures, or data submitted to any assignment is strictly prohibited; its use is in violation of our academic integrity policy.

The use of Generative AI/ChatGPT as an early starting point for your group or individual work is not always prohibited. Using Generative AI/ChatGPT to summarize knowledge and point you towards proper sources of information can be acceptable when specified by the instructor. However, we strongly caution you that (1) ChatGPT and related technology is not always accurate/correct, (2) assistive writing programs cannot be used to generate any of your writing, and (3) you as a scientist are fully responsible for what you write and we will assess (grade) the submissions based on what you write.

You are required to cite Generative AI/ChatGPT when utilized as a source or in your process of working on an assignment.

If you have any questions, please consult the instructor.

Academic Integrity

Students are expected to work with integrity and honesty and to comply with WPI's policy on Academic Honesty: (www.wpi.edu/Pubs/Policies/Honesty/policy.html)

All work submitted for ID2050 is to be original content produced by you and/or your immediate teammates. Plagiarized work will result in disciplinary action and academic sanction for the individual/s submitting the work.

In accordance with WPI's Academic Integrity Policy, students may use generative AI tools only for limited, preparatory purposes, such as brainstorming, organizing ideas, outlining, or generating questions to guide further research. Generative AI may not be used to write, revise, paraphrase, or edit any submitted work, including proposals, reports, reflections, analyses, or final deliverables. All submitted materials must reflect students' own original writing, reasoning, and synthesis.

Students are not expected to use generative AI in this course. Students who choose to use AI are expected to do so responsibly, transparently, and in alignment with course expectations. Because the IQP is a collaborative project, any use of AI must be discussed explicitly within the project team, and all team members must agree to its use. If consensus is not reached, AI should not be used.

Use of AI beyond what is explicitly permitted in this policy, including submitting AI-generated text as student work, misrepresenting the extent of AI involvement, or failing to secure team agreement, constitutes a violation of WPI's Academic Integrity Policy and may result in academic sanctions consistent with university guidelines.

Students are encouraged to consult instructional staff with questions about appropriate AI use prior to submission. When in doubt, ask.

Artificial intelligence (AI) language models and online homework-help platforms are widely available (examples include ChatGPT (OpenAI), Claude (Anthropic), Gemini (Google), Microsoft Copilot, Perplexity, as well as platforms such as Chegg®, Course Hero, and Brainly). Use of these or similar tools to generate assignment solutions is not permitted unless you follow the requirements below. This policy applies to all current and future AI-powered systems, whether or not they are explicitly listed here. In this course, you must not submit AI-generated or platform-generated solutions verbatim as your own work.

If you use AI tools as part of your learning process, you must:

1. Cite the tool and provide a direct link to the generated response at the end of your submission (so the grader is one click away; written links do NOT count).
2. Explain in your own words how you used the output to inform your solution (e.g. what you agreed with, what you adapted, what you corrected).
3. Show your full reasoning and intermediate steps, not just a final answer.

Submissions that do not follow these rules may receive zero credit. If the instructor or TA has reason to believe that a submission does not represent the student's own understanding, they will withhold the assignment and require the student to complete an oral exam to demonstrate mastery. Failure to demonstrate sufficient understanding will result in a failing grade on the assignment and may be reported as academic dishonesty under the WPI policy "[<https://www.wpi.edu/about/policies/academic-integrity/dishonesty>]|What is Academic Dishonesty]".
