APPENDIX B - POLICY ON RESPONSIBLE USE OF GENERATIVE AI TOOLS IN THIS COURSE

Generative AI has transformed the landscape of higher education, presenting both opportunities and challenges for teaching and learning. As an educator, I recognize the potential of generative AI to enhance student learning outcomes, foster creativity, and streamline certain tasks. However, I also acknowledge the need for critical thinking, ethical awareness, and responsible use of these technologies. It is essential for students to understand the limitations, biases, and potential consequences of relying on AI-generated outputs.

Permitted uses: research, brainstorming, outlining, editing, and getting feedback on student-drafted work.

Prohibited uses: submitting AI-generated content as original work; using AI to complete individual assessments without disclosure.

All AI use must be disclosed. Students are fully responsible for the accuracy of any AI-assisted content they submit.

ETR593

Use of GAI (generative AI):

The use of generative AI tools is a requirement in this class, with the following guidelines:

1. Citing AI Usage: If you use an AI tool to assist in generating content, you must include the prompt you used and a link or description of the AI tool as a footnote or in a dedicated section of your assignment. Transparency is key — just as you would cite any other source of information.
2. Permissible Uses: You may use generative AI to correct grammar and syntax, brainstorm ideas or refine your topic, generate an outline or structure, and fact-check or suggest sources.
3. Limits on AI Use: The final written work must be your own. You are not permitted to use AI to draft, write, or substantially complete any assignment.

Tentative Policy on Responsible Use of Generative AI

Note: Throughout this policy, the term "ChatGPT" is used as a representative example of generative AI tools that operate in a similar manner. The guidelines provided here are applicable to any other tool with comparable functionality.

Online discussions require a blend of creativity, critical thinking, and effective communication. In order to enhance your learning experience and encourage the development of these skills, you are allowed to use ChatGPT responsibly for the online discussion assignments. However, it is important to follow certain guidelines to ensure that the use of such tools contributes positively to your learning journey:

1. **Content Enhancement:** You can use ChatGPT to generate a foundational response to a discussion prompt, but you must significantly enhance it with your own insights, analysis, and critical thinking.
2. **Transparency:** Clearly indicate which parts of your response were generated by ChatGPT and which parts represent your own contribution. Include the prompt you used.
3. **Accuracy:** You are responsible for verifying the accuracy of all AI-generated content before including it in your response.
4. **Cite the ChatGPT URL used.**

Artificial Intelligence (AI) Use:

The use of generative AI tools in this class is strongly encouraged. However, if you use an AI tool to help you generate responses, you are required to (1) submit the URL that points to the AI tool, (2) submit the prompt(s) used during your interactions with the tool, and (3) discuss how you utilized the AI responses and the alterations you made to the AI responses. In addition, you are still responsible for the accuracy of the content that you submit. In other words, if the AI system generates inaccurate information, you will still be penalized for it. As such, you are required to double check any output you use from the tools to make sure it is correct. We will be discussing this early on during the weekly meetings.
