

Navigating AI Together: Faculty and Student Perspectives

Survey Demographics & Cohort Context*

Faculty Profile (N=155)

High Experience: 38% Senior (16+ years), 30% Mid-career (7-15 years).

Secure Status: 60% Tenured or Tenure-track.

Role: Split between Dual Mission (45%) and Teaching/Research Mission (34%), and Others.

Student Profile (N=107)

Discipline Bias: All STEM.

Top Majors: Computer Science, Mechanical Engineering, Robotics Engineering, Data Science.

* Given the sample sizes, these findings should be viewed as preliminary insights rather than representation of faculty and student behavior.

Adoption Rates Are Symmetrical*

Key Takeaway: There is no significant gap in adoption. Approximately 1 in 5 members of both groups have never touched the tools, while nearly half use them weekly.

Both Groups Identify Primarily as "Intermediate" Users*

Key Takeaway: Students report slightly higher confidence in their own abilities (fewer beginners and more advanced/experts)

Faculty Leverage AI for Backend Efficiency**

* Respondents could select multiple options

Key Takeaway: For every 1 professor in this survey building a student-facing AI tool, nearly 4 are using it to manage their own administrative burden.

Students Leverage AI As a Personalized Tutor**

** Respondents could select multiple options

Key Takeaway: The primary student driver is comprehension (reviewing material), followed by generation. This suggests a desire for 24/7 tutoring support.

Personal Resistance to Academic AI Use*

Faculty Resistance

Student Resistance

What's
driving this
difference?

Key Takeaway: Student resistance seems to be higher than faculty resistance.

Student Concerns**

Students want:

reliable answers,
clear rules, and
real learning.

* Respondents could select multiple options

Faculty Requests: Ethics and Assessment Design**

Ethical use / academic integrity guidance 56%

Classroom activities using AI 47%

HW/assessments redesign 44%

Others 22-38%

Faculty are not asking for technical support;

they are asking for pedagogical help.

** Respondents could select multiple options

Student Requests: Clear Policies and Usage Guidance❖❖

Clear AI policies from instructors 50%

Tips on using AI effectively for studying 37%

Workshops on ethical AI use 21%

Students want to know the boundaries, and how to work effectively within them.

❖ Respondents could select multiple options

Reflect on Your Experience

- A. What in this presentation surprised you or matched your experience?
- B. Describe one moment when AI expectations in a course were unclear to you.

What We Are Navigating

What Can We Do?

What I Will Do Differently

C. One thing I will do differently after today:
