

# Assignment Redesign Worksheet

## Course information:

Course Num/No.: \_\_\_\_\_ Enrollment: \_\_\_\_\_ TA/PLA Support hours/week: \_\_\_\_\_

## Original Assignment:

- Short description:
- What students currently do/produce?
- Learning outcomes:

## Redesign:

What is the new model (AI-Free, AI-Assisted, AI-Integrated)?

Where is the critical thinking in the assignment? (e.g. choosing methods, making assumptions, evaluating results, etc.)

Where is the decision-making? (If there is none, then AI can do it)

How will 2 students' responses differ meaningfully? (If all valid responses are similar then AI can do it)

What specific/custom information is uniquely embedded in your HW? (e.g. parameters, data logs, classroom context, etc.)

What must the students explain/justify beyond their submission? (e.g. methods, predictions, interpretation, etc.)

How will you evaluate it at scale? (e.g. in-class individual or team, out of class, etc.)

Is it scalable at your current course size/support?

Verify The Learning Outcomes

How will you verify the learning outcomes are met? (e.g. short written rationale, annotated code, flowcharts, AI response critique, etc.)

Suggested Rubric Redesign (modify if need be)

| Task                                              | Suggested % | Revised % |
|---------------------------------------------------|-------------|-----------|
| Reasoning shown in submission                     | 10%         |           |
| Interpretation, reflection, prediction            | 30%         |           |
| Evidence of process in submission                 | 10%         |           |
| Evidence of reasoning and process post submission | 30%         |           |
| Technical quality and accuracy                    | 20%         |           |
|                                                   |             |           |
|                                                   |             |           |
|                                                   |             |           |
|                                                   |             |           |
|                                                   |             |           |
|                                                   |             |           |
