HUA · All 1000-, 2000-, and 3000-level GSWS and HI courses as well as inquiry seminars

Can I use generative AI in this class?

You cannot use generative AI for any assignments in this course. In this class, I am asking you to invest in your own creative process, critical thinking, and research skills. Learning is not meant to be a friction-less or linear path. It also may mean that the work you complete looks different than what you originally intended or hoped...and that is okay! It is my hope that we use these eight weeks to learn to better ask questions, utilize university resources, and hone skills that will serve you for the rest of your college career and beyond. So, the direct and unattributed utilization of generative AI for any part of any assignment constitutes academic dishonesty and will be treated as such.

STEM Education Center · EDU courses

The STEM Education Center values empowering educators and learners to engage in meaningful learning and critical thinking. With the understanding that deep learning often requires productive struggle and metacognition (reflection on thinking), the use of generative artificial intelligence (GenAI) should be used in intentional and ethical ways. While AI can be a helpful tool for educators and learners in accessing complex texts or ideas, the human learner has the responsibility of overseeing and judging the outputs to enhance learning (not replace the thinking), and to mitigate risks.

Each EDU course, assignment, and activity is context-specific with distinct learning objectives, and students must demonstrate their proficiency in genuinely attaining the course and assignment objectives.

IMGD/HUA · AR/IMGD 3200 Interactive Electronic Arts

What about AI?

At this time, it is strongly discouraged to include AI-generated images, videos, text or sounds in your course work, unless your artwork is explicitly focused on a critical examination of generative AI itself. Any AI-generated content must be clearly credited in your posts. Failure to disclose the authorship of AI-generated content will be considered an act of academic dishonesty and may result in loss of credit for the assignment and/or the course.

Artificial Intelligence and Academic Integrity

Why I've made these choices about AI

As Director of the Morgan Teaching & Learning Center I am constantly examining AI use in higher education, including the impact it can have on you as a learner. I often use AI to try and push the limits of what it can do in a teaching and learning setting. I expose myself to the ethical, sustainability, labor, and societal implications of AI in order to refine my own philosophy of its use.

A few ideas and findings that have impacted my current thoughts around AI include:

- Generative AI is just a statistical text predictor. It will always create average text that is high probability. Nothing it produces will ever be new or innovative.
- Research on desirable difficulties shows that struggle leads to deeper learning. AI removes that struggle.
- AI use has been shown to reduce motivation and confidence over time in learners who rely on it.

For this course: AI may be used for brainstorming and getting feedback on drafts. AI may not be used to generate content you submit as your own. Disclosure required for any AI use.

Humanities and Arts (History) · All undergraduate courses

Generative artificial intelligence tools — software that creates new text, images, computer code, audio, video, and other content — have become widely available. Well-known examples include ChatGPT for text and DALL-E for images. This policy governs all such tools, including those released during our semester together.

You may use generative AI tools on assignments/exams in this course, following the guidelines for appropriate and inappropriate use outlined below:

Appropriate Use of Gen AI tools:

- You are free to use spell check, grammar check, and synonym identification tools (e.g., Grammarly, and MS Word).
- You are free to use GenAI recommendations when it comes to rephrasing sentences or reorganizing paragraphs you have drafted yourself.

Inappropriate Use of Gen AI tools:

- You may not use GenAI to draft any portion of an assignment or exam response.
- You may not use GenAI to conduct research or generate ideas.
- All work submitted must represent your own original analysis and writing.

Teacher Preparation Program (STEM Education Center) · EDU — All undergraduate courses

The STEM Education Center values empowering educators and learners to engage in meaningful learning and critical thinking. With the understanding that deep learning often requires productive struggle and metacognition (reflection), the use of generative artificial intelligence (GenAI) should be used in intentional and ethical ways. While AI can be a helpful tool for educators and learners, humans have the responsibility of overseeing and judging the outputs to enhance learning (not replace the thinking), and to mitigate risks. Each EDU course, assignment, and activity is context-specific with distinct learning objectives, and students must demonstrate their proficiency in genuinely attaining the course objectives. Each student is responsible for assessing the validity and applicability of AI outputs.

HUA · All courses

Use of AI is not permitted and will be considered a violation of the Academic Integrity Policy. Common examples of Academic Integrity violations include: Copying and pasting text directly

from a source without providing appropriately cited credit; includes submitting generative AI text as your own work.

IMGD · IMGD 1002: Storytelling in Interactive Media and Games

Because this is a writing course, the expectation is that you alone are doing the writing with the intention of improving your writing skills. As such, you **MUST** adhere to the following AI use guidelines for all assignments:

Appropriate use of AI for all assignments:

- You may use spellcheck, grammar check, and synonym identification tools (ex. Grammarly, MS Word).
- You may use app recommendations when it comes to rephrasing sentences you have drafted yourself.

Inappropriate use of AI for all assignments:

- You may not use original or entire sentences, lines of dialogue, or paragraphs generated by AI.
- You may not use AI to conduct research or generate ideas for your writing.
- Submitting AI-generated content as your own work constitutes academic dishonesty.

HUA · All courses

I use a scale. The policy depends on the assignment. Happy to share my scale.

Humanities and Arts · ALL COURSES

AI Policy/ChatGPT, Grammarly, etc.: Any use of Artificial Intelligence is strictly forbidden in this class. This includes: brainstorming or running "practice" questions through an AI program; outlining; Canvas posts; formulating essay drafts; proofing work. Students who submit papers showing clear evidence of AI use will receive an NR or appear before the Campus Hearing Board; students who submit work that merely "sounds" like AI will be required to submit a new essay and pass an oral exam on the paper. Don't outsource your intelligence or moral integrity to a machine. You are better than that.

HUA · CN2542 Intermediate Chinese II, CN2543 Intermediate Chinese III, CN3541 Advanced Chinese

AI Policy: Expectation of the AI Use in CN2543

In CN2543, students have a choice and are encouraged to use AI tools to enhance their language learning experience, such as practicing conversation, receiving feedback on language use, or gaining explanations of grammatical concepts. When used ethically and intentionally, AI can serve as a role of valuable Pen-pal or Coach, supporting practice, reflection, and continuous improvement during the learning process. These roles help students build proficiency and deepen their understanding of the learning process. However, using AI as a role of Nanny by submitting AI-generated content as one's own work, is a violation of academic integrity and is strictly prohibited. AI should support, not replace, student effort to learning. The goal of students using AI in CN2543 is to develop language skills and deepen understanding, not bypass the learning process.
