WHAT YOUR COLLEAGUES ARE DOING

■ Very satisfied (1)

DIGS · All undergraduate and graduate classes

AI: I would like to encourage transparency in your use of AI. If you decide to enlist the use of AI for class assignments, please include 1-2 paragraphs that explain which AI you used, how you used it and why and use yellow highlights to show any text that was generated by AI. Because it is increasingly getting difficult to identify the use of AI in written papers, if I suspect that AI was used I will ask you about it and may give you an impromptu oral exam to confirm that the work you submitted was not outsourced to AI. Please do not take this personally: if the work is truly your own, then you will "ace" this impromptu oral exam.

DIGS · ID2050, IQP

Academic Integrity

Students are expected to work with integrity and honesty and to comply with WPI's policy on Academic Honesty: (www.wpi.edu/Pubs/Policies/Honesty/policy.html)

All work submitted for ID2050 is to be original content produced by you and/or your immediate teammates. Plagiarized work will result in disciplinary action and academic sanction for the individual/s submitting the work.

In accordance with WPI's Academic Integrity Policy, students may use generative AI tools only for limited, preparatory purposes, such as brainstorming, organizing ideas, outlining, or generating questions to guide further research. Generative AI may not be used to write, revise, paraphrase, or edit any submitted work, including proposals, reports, reflections, analyses, or final deliverables. All submitted work must represent the original thinking and writing of the student or team.

DIGS and SSPS · ENV courses, GPS courses, IQP courses

Academic Integrity:

Students are expected to work with integrity and honesty and to comply with WPI's policy on Academic Honesty: <https://www.wpi.edu/about/policies/academic-integrity>

In addition, I would like to provide some general guidelines for appropriate use of (generative) AI tools in an academic setting.

Appropriate uses of generative AI could include:

- Assistance with the elements of the writing process including organization and editing. Editing should be done with tools that assist with rather than generate rewrites. Examples of appropriate assistance include DeepL Write and Grammarly.

- Assistance with research, such as Elicit. It is important to remember that AI often makes mistakes and all AI generated content should be verified for accuracy.
- Translation using tools such as DeepL.
- Accessibility support.

Inappropriate uses include generating original analysis, arguments, or content submitted as your own work. All submitted ideas and conclusions must originate with the student or team.

Management — IQP projects · IQP Project Advising

Statement on ChatGPT/AI

If you plan on using generated, assisted, or edited by ChatGPT or other AI tools, you have to be transparent on how you completed and what you completed. Submissions will be subject to detection checks in some cases. IQP reports are searchable through WPI archives and so will be in the public domain. Your sponsors expect original work and reporting that will support their own collaborations and efforts in their field of expertise. It is furthermore a great disservice to your own creative development, as well as to your study participants, to rely only on AI to assess and present the results. Evidence of statements and manual processes used to evaluate AI material can be required (an easy way to do this is to explain in detail and reference certain sections with all the relevant material that was evaluated).

Adjunct DIGS, EMERITUS CEE · IQP advising

Not developed yet, but agree that one should be in place for IQP.
