WHAT YOUR COLLEAGUES ARE DOING

■ Very satisfied (3)

BBT · All undergraduate courses

There are a lot of reasons to be weary of AI. It's bad for the environment, the ethics surrounding the use of data it's been trained on is gray at best, and AI hallucinations can cause dissemination of misinformation. But, it's a tool that now exists and learning how to live with that is a challenge that we as a society need to confront. In this course, our AI policy is two-fold.

1) When you are in class, AI is banned. Because of how easy it is to use AI on a variety of platforms, this means any graded assignment in class (unless otherwise noted) will be completed without any technology (bring a pen or pencil to class). Use of a computer, phone, smartwatch, especially shiny rock, or anything that could conceivably connect to the internet during a quiz or project will result in an automatic zero for that assignment.

2) When you are outside of class, AI can be used with caveats. You must note in your work where you consulted with AI, which AI program you used, and how you prompted it. You are also responsible for any errors or inaccuracies generated by AI.

Physics · PH 2510

AI statement

Your fellow students in SGA came up with a solid set of recommendations for use of AI in courses. It is posted at our Canvas site. Please read it, it is posted in the Key Files Canvas module.

In general, I want you to acknowledge any use of AI beyond grammar-checking, which is already integrated into Word. Specifically, for Instrument Lab Reports 3 and 4, I will ask you to write an outline yourself, feed it into Microsoft Copilot, then critique Copilot's output in your own words. Then we will discuss its limitations in scientific writing.

Generative AI Statement

Using AI to generate answers to your assignments/project, reflections, or assignment revisions undermines your ability to develop critical thinking skills that are essential for this course and your academic success. That being said, understanding how and when to use generative AI tools (such as ChatGPT) is quickly emerging as an important skill. To that end, you are welcome to use generative AI tools in this class if it aligns with the learning outcomes or goals associated with assignments.

However, you are fully responsible for the information you submit based on a generative AI query (such that it does not violate academic honesty standards). Your use of generative AI

tools must be properly documented and cited for any work submitted in this course. It is assumed that all work submitted by students will be generated by the students themselves and not by generative AI, unless explicitly authorized.

■ Satisfied (6)

Computer Science · All undergraduate courses

Generative AI is treated like any online resource (e.g., Google). Just as you should not use search engines or forums to simply give you an answer, you should not use AI in the same way. Always consult course materials first (such as lectures, videos, documentation, or course staff). AI or third-party tools may only be used to support learning and refinement, such as debugging, suggesting improvements, summarizing, or clarifying problems.

You assume full ownership for all submitted work. If you cannot explain your own work, you may be asked to recreate it; failure to do so can result in missed objectives, rubric penalties, or grade deductions.

Do not input homework or exam questions into AI systems, as course materials are copyrighted. Remember: AI can be biased, inaccurate, and inaccessible to all students.

Computer Science · CS 2303, CS 1004

- You cannot use code or any part of an assignment that you find online or get from another source.
- You cannot post your Project code or any part of an assignment online (i.e., in public Github repositories). This remains true after the end of the term.
- You cannot use ChatGPT or other AI tools. This includes debugging and writing code. You cannot paste code into ChatGPT or copy from ChatGPT output.
- You cannot email or otherwise distribute any part of your projects to others. Any sharing of any part of a project (code, pseudocode, README, etc.) that could allow for distribution or submission by another person is not allowed.

Generative AI Course Policy

Your work on the assignments, assessments, and projects reflect your own original ideas and creativity. Thus...

The use of Generative AI or ChatGPT to produce writing, figures, or data submitted to any assignment is strictly prohibited; its use is in violation of our academic integrity policy.

The use of Generative AI/ChatGPT as an early starting point for your group or individual work is not always prohibited. Using Generative AI/ChatGPT to summarize knowledge and point you towards proper sources of information can be acceptable when specified by the instructor. However, we strongly caution you that (1) ChatGPT and related technology is not always accurate/correct, (2) assistive writing programs cannot be used to generate any of your writing, and (3) you are responsible for the integrity of your submissions.

BBT · BB 3950

GENERATIVE AI POLICY: Your work on the assignments, assessments, and projects should reflect your own original ideas and creativity. For the purposes of this course, "generative AI" includes use of programs including, but not limited to, ChatGPT, DeepSeek, and Anara. The use of generative AI to produce writing, figures, or data submitted to any assignment is strictly prohibited, and its use in this way is a violation of our academic honesty policy. The use of

generative AI during in-class work is prohibited unless specifically directed otherwise for a specific assignment.

The rule about the Gemini feature that is now built into Google searches is slightly different. If you are given instructions for an assignment that permit Google searches, you may read the Gemini summary that appears at the top of your search.

Generative AI and Academic Integrity Policy

This course operates on trust and integrity. You can trust me to give feedback on your work, to structure policies to support your learning as best I can, and to give my honest opinion on your usage of AI in whatever circumstance you choose. I trust you not to pass off generated content as your own, and overall to act with integrity and the intent to further your learning if you choose to experiment with generative AI systems. Specifically:

- If you decide to use generative AI in a project or assignment, please disclose how you have used it in a supplemental document that you upload with your submission. At a minimum, clarify: which tool(s) you used and for what, what you perceive as the pros and cons of having used it, how you incorporated generative AI output, and what you learned from the experience.
- I trust you to make the choice that is most conducive to your learning and to your long-term success.

Computer Science · CS 3431, CS 3733, CS 4233

Policy for the Use of Generative AI (LLMs)

Use of Large Language Models (LLMs) or other Generative AI tools (such as ChatGPT, GitHub Copilot, or similar systems) is not permitted for any graded assignments unless explicitly stated otherwise by the instructor.

All graded work is expected to represent your own individual effort (or your team's collective work, in team assignments). If you use external sources for inspiration, examples, or background information — such as during warmup exercises or for your term project — you must cite all sources clearly.

If you are ever uncertain whether a particular use of AI is permitted, ask the instructor before using it.

■ Neither (3)

Computer Science · CS1101, CS2102, CS4533

This is a policy that has been shared across instances of CS1101 and CS2102, the intro sequence for Computer Science with multiple professors. We don't know if it is our long-term solution, but it is how we are viewing it for now:

AI Policy

Generative AI is treated like any online resource (e.g., Google). Just as you should not use search engines or forums to simply give you an answer, you should not use AI in the same way. Always consult course materials first (such as lectures, videos, documentation, or course staff). AI or third-party tools may only be used to support learning and refinement, such as debugging, suggesting improvements, summarizing, or clarifying problems from your own understanding.

You assume full ownership and responsibility for all submitted work. You must be able to explain your work when asked. Failure to explain or reproduce work on request may result in academic integrity review.

Mathematical Sciences · MA3257 Spring 2025 (Large Take-home Final)

Artificial intelligence (AI) language models and online homework-help platforms are widely available (examples include ChatGPT (OpenAI), Claude (Anthropic), Gemini (Google), Microsoft Copilot, Perplexity, as well as platforms such as Chegg, Course Hero, and Brainly). Use of these or similar tools to generate assignment solutions is not permitted unless you follow the requirements below. This policy applies to all current and future AI-powered systems, whether or not they are explicitly listed here. In this course, you must not submit AI-generated or platform-generated solutions verbatim as your own work.

If you use AI tools as part of your learning process, you must:

1. Cite the tool and provide a direct link to the generated response at the end of your submission (so the grader is on notice that AI was used and can review).
2. Explain in your own words why you used the tool and how it helped or did not help.
3. All final answers must represent your own understanding and be written in your own words.

BBT · BB552: Scientific Writing and Proposal Development

For a graduate grant writing course:

Generative Artificial Intelligence (AI) Tools: You may use generative AI programs, e.g. ChatGPT, to help generate ideas and brainstorm, or for rote tasks such as formatting citations or checking grammar. You should note, however, that the material generated by these programs may be inaccurate, incomplete, biased or otherwise problematic. Beware that AI use may also stifle your own independent thinking and creativity. Generative AI-written content derives its output from other sources that the models were trained on, yet does not cite those sources itself, and is thus a form of plagiarism. You may not submit any work generated by an AI program as your own. If you include material generated by an AI program, it should be cited like any other reference material.
